

## 2003 Prescription Drug Benefit

### Introduction

This Member Formulary is a useful aid to understanding your drug benefit program. The formulary is a list of drugs reviewed and approved by an independent committee of physicians and pharmacists. The formulary includes drugs that are commonly prescribed by physicians, clinically useful, and cost-effective.

Bring this Member Formulary to your doctor appointments. Your doctor can review the formulary and determine if a drug listed is appropriate for you. When you have a prescription filled, your copayment will be at one of three levels or "tiers". Tier 1 and tier 2 drugs will be the lower copayments. However, a Tier 1 or Tier 2 drug may not always be available or the best choice for your medical condition.

Tier 1 (lowest copayment) includes only generic versions of brand name drugs. Generic drugs are noted in lowercase type. The brand name product appears next to it ("generic of") as a reference only. All generic drugs, whether listed in this formulary or not, are the lowest copayment.

Tier 2 (intermediate copayment) includes selected brand name drugs. Brand name drugs are noted in all capital letters.

Tier 3 (highest copayment) includes all brand name drugs not listed in Tier 2 and includes all brands not listed in this formulary.

**Brand name drugs are shown in capital letters. Those with generic versions available are identified with a (G). Generic versions of brand name drugs are always in Tier 1 (lowest copayment).**

The drug names listed here are the registered and/or unregistered trademarks of third-party pharmaceutical companies unrelated to and unaffiliated with AdvancePCS. These trademarked brand names are included here for informational purposes only and are not intended to imply or suggest any affiliation between AdvancePCS and such third-party pharmaceutical companies.

### Learning More About Generic Drugs

One way you can reduce your out-of-pocket cost is by requesting a generic drug. A generic drug is a copy of the original brand name drug, whether prescription or over-the-counter. Generic drugs are usually priced lower than their brand name equivalents.

Generic drugs are:

- Approved by the U.S. Food and Drug Administration for safety and effectiveness, and are manufactured under the same strict standards, which apply to brand name drugs.
- Tested in humans to assure the generic is absorbed into the bloodstream in a similar manner as the brand name drug. Generics may be different from the brand in size, color, and inactive ingredients, but this does not alter the effectiveness or the ability to be absorbed just like the brand name drug.
- Manufactured in the same strength and dosage form as the brand name drug.

**When switching from a brand name drug to a generic drug, you can expect the generic to produce the same clinical effect and safety profile as the brand name drug.**

### Helpful Hints for Taking Drugs Properly

- Consult your pharmacist when you have questions about prescription and over-the-counter drugs.
- Read and heed labels.
- Take your medication exactly as prescribed.
- Store your medication at room temperature unless advised differently on the label.
- Display the telephone number of your local Poison Control Center on your phone.
- Keep an up-to-date list of your prescription and over-the-counter drugs, including the dosage schedule and the name of the prescribing physician, in your purse or wallet. Every time you have an appointment, show the list to your doctor.

### Important

**Your benefit coverage may not be limited to this list. There may be drugs listed here that are not covered by your specific plan. Some strengths/dosage forms of drugs listed may not be on the formulary. Using this list is voluntary. This list is subject to change at any time. Refer to your benefit materials or call your prescription benefit member services telephone number for specific coverage information.**
